PARTS AND SERVICE

SUBJECT IMPROVED REAR SPRINGS -
1963 P MODELS (WITH SLIDING ROOF)

NUMBER T-1963-3

FROM C. R. MCINTOSH, Manager
Passenger Car Technical Service

DATE March 20, 1963

The rear springs used on 1963 Model Station Wagons have been re-cambered to provide greater carrying height. The new rear springs, Part Numbers 1560440, Standard Spring and 1560439, Heavy Duty Springs, entered production with car Serial Numbers 63S-21236 and 63V-18615 on models equipped with Standard Rear Springs and 63S-21914 and 63V-19236 on models equipped with Heavy Duty Rear Springs.

If you receive complaints of low carrying height at the rear on Station Wagon Models with serial numbers below those listed above, replace both rear springs with the new springs. These parts are available upon order from your Parts Depot.
